

Dear Fisherman,

Thank you for purchasing Winco's Custom lures products. Quality plastics, components, design and innovative changes make our products perform with outstanding results.

1- Scent, salt, and sand are mixed into the plastic before pouring. Neither product will wash off with repeated use. No additional added scent is recommended.

2- Rig all stick worms along the seem to ensure the fully-rounded worm hangs and falls horizontally. The worm will "shimmy" from side to side with that enticing "tail-wiggle" on the drop. All other worms should be rigged flat side down. The bait will dart and fall properly when hooked in this manner. Most fish will be hooked in the roof of the mouth.

3- Mustad Ultra-point/Gamakatsu hooks are recommended for use when rigging all Winco's soft baits

4- Winco's soft baits sink without any additional weight being added (except specific floating models)

5- All "Wacky" worms come with a tight band or an (o) ring around the center of the worm. Rig the hook through the center of the worm, under the band, and exposed on the other side. **Mustad Ultra-point/Gamakatsu octopus circle hooks are recommended.** A piece of plastic worm over the hook point will make this rig 90% weedless and give you the ability to finesse the rig through trees. The use of a 1/16 ounce WATER GREMLIN "bull-shot" 6 inches below the wacky worm will enhance the wacky-action and produce a quicker decent.

6- We strongly recommend the use of PRO's SoftBait Glue® (Caution !!! This product has the consistency of water, "do not" squeeze the container when applying). Rig your hook into your softbait with the line attached as you normally would. Hold the line about 3" above the softbait and apply one drop of glue where the line enters the lure (wait 15 seconds). This product can also secure plastic trailers on spinnerbaits, buzzbaits, and jigs. The product MEND-IT will successfully repair all of your split/torn swim-baits and soft plastics.

7- Our products have been thoroughly tested and used with outstanding results throughout the United States of America, Canada and Mexico.
